

The FCC has done as much as it could in the past to equally protect the domestic and international communications spectrum.. However, I feel at this time that I must join with many other concerned citizens in protesting the proposed power increases of the broadband over power line technology.. For the power companies to even file such a request is pure arrogance, since this will have a severe effect on HF broadcasting, military, civilian, amateur, .. It is another case of "the public be damned" for the sake of profit of large corporations... Force the power companies to comply with existing regulations, prohibit them from this power increase and protect the interests of the citizens of this country... Thats what the FCC is for!!!!
